- [Introduction](#)(see page 4)
- [Updated Rosetta Stone \(JSON Implemented in Release 7.4.0 \)](#)(see page 5)
- [Second Pass - Rosetta Stone \(Implemented in Release 7.3.0\)](#)(see page 33)
- [First Pass \(Implemented in Release 7.2.0, \(with variable names updated to exact implementation, including a typo\)](#)(see page 61)

# 1 Introduction

At the [May 28, 2021 project meeting](#)<sup>1</sup>, we set the stage for some [OBUDPST-17](#)<sup>2</sup> JSON output label revisions in the near term.

**2 passes** (slightly clarified from the meeting notes)

- - first pass is to produce the JSON output for the **easy-to-capture text output**, and the test context/configuration (elements for the Minimum Profile are included below).
  - Completed documenting the First Pass on  [22 Sep 2021](#) and moved the table to section 4 below.
- - Next - work JSON for the entire MINIMUM Profile - section 3 table below

**Next**, we began a series of updates to track new JSON output (section 2). Green rows indicate additions or changes.

---

## 2 Updated Rosetta Stone (JSON Implemented in Release 7.4.0)

Table below starts with Test context and Input configuration info, then output (results). "X" = Part of Minimum Profile.

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
	"Input":	"Interface": "",	<p><b>Table 1:</b> Interface <b>TR-181</b></p> <p>The value MUST be the Path Name of a table row. The IP-layer interface over which the test is to be performed. Example: Device.IP.Interface.1</p> <p>If an empty string is specified, the device MUST use the interface as directed by its routing policy (<i>Forwarding</i> table entries) to determine the appropriate interface.</p>	string(256)	
Mode: Client Downstream Test	"Input":	"Role": "Receiver",	<p><b>Table 1:</b> Role <b>TR-181</b></p> <p>Indicates whether the device will act as Sender or Receiver of test packets. Enumeration of:</p> <ul style="list-style-type: none"> <li>• <i>Receiver</i> (The device will act as the Receiver)</li> <li>• <i>Sender</i> (The device will act as the Sender)</li> </ul>	string(256)	X
NA (Command line input)	"Input":	"Host":	<b>Table 1:</b> Host	string(256)	X
NA	"Input":	"Port":	<b>Table 1:</b> Port	unsignedInt ; [1:65535]	
Jumbo Datagrams: Enabled (above 1Gbps by default)	"Input":	"JumboFramesPermitted": 1,	<p><b>Table 1:</b> JumboFramesPermitted</p> <p>TR-181 same name (incomplete description, default not revised yet) <b>SB - RED</b></p>	Boolean; [0:1]  <u>Default SHOULD BE 1</u> (True: permitted for sending rates above 1Gbps)	X

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
(only 1 supported)	"Input":	"NumberOfConnections": 1,	<b>Table 1:</b> NumberOfConnections	unsignedInt ; 1 ≤ # ≤ 10, or supported Maximum if less than 10	
		N/A	<b>Table 1:</b> EthernetPriority TR-181 same	unsignedInt ; [0:7] Default: 0 = Best Effort	
IPv4 ToS: 0	"Input":	"DSCP": 0,	<b>Table 1:</b> DSCP	unsignedInt ; [0:63] Default: 0 = Best Effort	X
Input options:  -4 Use only IPv4 address family (AF_INET)  -6 Use only IPv6 address family (AF_INET6)  no output with addresses	"Input":	"HostIPAddress": "1.2.3.4",  "ClientIPAddress": "10.0.0.226",  (If IPv6 is used, it will be evident in these "key": value pairs)	<b>Table 1:</b> ProtocolVersion TR-181: same  Indicates the IP protocol version to be used. The default value SHOULD be Any. Enumeration of:  <ul style="list-style-type: none"> <li>Any (Use either IPv4 or IPv6 depending on the system preference)</li> <li>IPv4 (Use IPv4 for the requests)</li> <li>IPv6 (Use IPv6 for the requests)</li> </ul>	string; Default is "Any"	

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
	"Input":	"UDPPayloadMin":35, "UDPPayloadMax":8972,	<b>Table 1:</b> UDPPayloadRange TR-181 has UDPPayloadMin and UDPPayloadMax <b>SB-RED Max=8972</b>	unsignedInt ; [35:8972] Default for range, min and max <b>Max 8972 when Jumbo Frames permitted, 1472 without Jumbo frames.</b>	
	"Input":	"UDPPayloadDefault":1222,		unsignedInt ; default is 1222	
	"Input":	"UDPPayloadContent": "zeroes",	<b>Table 1:</b> UDPPayloadContent <b>TR-181 same</b> Enumeration of: <ul style="list-style-type: none"> <li>• ones,</li> <li>• zeroes,</li> <li>• alternates0and1</li> <li>• random</li> </ul>	string; Default is all zeroes.	
			<b>Table 1:</b> PortRange <b>TR-181</b> has PortMin and PortMax  Not in Minimum Profile, but description in TR-181 says: <b>[MANDATORY]</b> Starting value for range of Dynamic Ports supported for test traffic and status feedback messages. <b>SB-RED: Delete [MANDATORY]</b> on Min and Max		

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
			<b>Table 1:</b> PortRangeOptional <b>TR-181</b> has PortOptionalMin and PortOptionalMax		
SendingRate Index: <Auto> or <rate> from  Command line input,-l <rate>	"Input":	"TestType": "Search",	<b>Table 1:</b> TestType TR-181: same  Indicates the type of IP-Layer Capacity test being run. The default value SHOULD be <i>Search</i> . Enumeration of: <ul style="list-style-type: none"> <li>• <i>Search</i> (Search algorithm will be used to determine sending rate)</li> <li>• <i>Fixed</i> (Fixed sending rate will be used)</li> </ul>	enumeration; search or fixed (default is search)	X
DelayVar Thresholds(ms): 30-90 <b>[RTT]</b>	"Input":	"IPDVEnable": 0,	<b>Table 1:</b> EnableIPDV <b>TR-181:</b> IPDVEnable  Configuration for the measurement system permitting One-way measurement of IPDV as per [Y.1540]	Boolean; [0:1] 0=False, Use RTT= round-trip delay variation in the load rate adjustment algorithm (non-default is 1=True EnableIPDV which uses one-way delay variation for the load rate adjustment algorithm)  <b>Note:</b> <b>Added more explanation in TR-471</b>	X

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
	"Input":	"IPRREnable": 1,	<b>Table 1:</b> EnableIPRR <b>TR-181:</b> IPRREnable Configuration for the measurement system permitting measurement of IPRR as per [Y.1540]	Boolean; [0:1] 0=False,IPRR disabled	X
	"Input":	"RIPREnable": 1,	<b>Table 1:</b> EnableRIPR <b>TR-181:</b> RIPREnable Configuration for the measurement system permitting measurement of RIPR as per [Y.1540]	Boolean; [0:1] 0=False,RIPR disabled	X
	"Input":	"PreambleDuration": 0,	Table 1: PreambleDuration TR-181 same Duration of active traffic preamble to testing.	unsignedInt ; 0 ≤ seconds ≤ 5 default 2 sec	
StartSendRate Index:	"Input":	"StartSendingRateIndex": 0,		unsignedInt ; -1 ≤ # ≤ 1090 (10 Gbps) default is -1 = 500kbps	
SendRate Index:	"Input":	"SendingRateIndex": -1,	<b>Table 1:</b> StartSendingRate <b>TR-181:</b> StartSendingRate (471) The current sending rate (equivalent to a row of the table), Initialized at minimum Sending Rate in the Table of Sending Rates (181) <b>[MANDATORY]</b> The Sending Rate for a <i>Fixed</i> <sup>3</sup> test or the initial Sending Rate value for a <i>Search</i> <sup>4</sup> test. Value specified in	unsignedInt ; 500 ≤ # ≤ 10,000,000 (10 Gbps) default is 500kbps

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
			<i>kbps</i> . The default value SHOULD be 500 <i>kbps</i> . <b>SB-RED: Delete [MANDATORY]</b>		
	"Input":	"NumberTestSubIntervals": 10,	<b>Table 1:</b> <i>m</i> TR-181 NumberTestSubIntervals Number of intermediate measurement intervals, <i>dt</i> , in $\Delta t$	unsignedInt ; $1 \leq \# \leq 100$	X
	"Input":	"NumberFirstModeTestSubIntervals": 0,	<b>Table 1:</b> <i>i</i> TR-181: NumberFirstModeTestSubIntervals Number of measurement intervals, <i>dt</i> , included in the report of the initial Capacity mode (1 and higher). The remaining sub-intervals of the total <i>m</i> are reported separately. "0" is used to replace the EnableBimodal parameter, and means the Bimodal analysis is NOT enabled.	unsignedInt ; $0 \leq \# \leq m$ Note: <i>m</i> is the practical limit for a consistent test, and 100 is an absolute limit	X
Sub-Interval[1] (sec): <b>1</b>	"Input":	"TestSubInterval": 1000,	<b>Table 1:</b> <i>dt</i> (TestSubInterval) TR-181: same Duration of intermediate reporting intervals	unsignedInt ; $100 \leq ms \leq 6000$ (max $\Delta t / (m=10)$ ) in milliseconds) MUST meet Type;Range constraints on $\Delta t = m * dt$ .	X ??
Trial Interval(ms): <b>50</b>	"Input":	"StatusFeedbackInterval": 50,	<b>Table 1:</b> StatusFeedbackInterval TR-181: same	unsignedInt ; 50ms $20 \leq ms \leq 250$	X

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
	"Input":	"TimeoutNoTestTraffic": 1000,	<b>Table 1:</b> TimeoutNoTestTraffic TR-181: same  Timeout value, no test packets at Receiver since previous test packet.	unsignedInt ;  500 ≤ ms ≤ 1000  Default is 1000ms: This value is consistent with a 10 sec test duration.	
	"Input":	"TimeoutNoStatusMessage": 1000,	<b>Table 1:</b> TimeoutNoStatusMessage TR-181: same  Timeout value, no Status Messages at Receiver since previous Staus Message.	unsignedInt ;  500 ≤ ms ≤ 1000  Default is 1000ms: This value is consistent with a 10 sec test duration.	
	"Input":	"Tmax": 1000,	Table 1: TimeoutNoTestTraffic TR-181: same  Maximum one-way Waiting time for packets to arrive	unsignedInt ;  500 ≤ ms ≤ 1000  Default 1000ms	
	"Input":	"TmaxRTT": 3000,	Table 1: TimeoutNoStatusMessage TR-181: same  Timeout value, no Status Messages at Sender since previous Status Message	unsignedInt ;  500 ≤ ms ≤ 1000  Default 1000ms	

udpst text output	JSON Category	Current JSON name	TR-471 name (and TR-181 name for unique output parameters)	TR-471 Format and Units	Min Profile
	"Input":	"TimestampResolution": 1,	Table 1: TimestampResolution TR-181: same  (from the data model) Indicates the requested precision of timestamp values. The test implementation will determine the actual precision to use based on the implemented resolution capabilities of the protocols used and this requested value. If the implemented resolution capabilities of the <a href="#">IPLayerCapSupportedMetrics</a> <sup>5</sup> protocols being used are able to provide the requested resolution, this resolution SHOULD be provided. Value specified in <i>microseconds</i> . The default value SHOULD be 1 <i>microseconds</i> .		
SeqError Threshold: 10	"Input":	"SeqErrThresh": 10,	<b>Table3:</b> SeqErrThresh TR-181: same  Threshold for Loss or Reordering or Replication impairments measured (events where received packet sequence number did not increase by one)	unsignedInt ; 10  0 ≤ SeqErrThresh ≤ 100	X
Ignore OoO/ Dup: Disabled	"Input":	"ReordDupIgnoreEnable": 0,	<b>Table3:</b> ReordDupIgnoreEnable TR-181: same  Configuration of SeqErrors counting to ignore Reordering and Duplication impairments measured (only Loss counts toward received packet sequence number errors)	Boolean; [0:1] 0 (False: not enabled)	X

The Minimum One-way Delay shall be calculated using the conditional distribution of all packets with a finite value of one-way delay (undefined delays are excluded, as described for other delay measurements). This value is expressed in <i>seconds</i> .	seconds, decimal64 with fraction digits = 9 (see section 9.3 of [RFC7950]) with resolution of 0.000000001 seconds (1.0 ns).

### 3 Second Pass - Rosetta Stone (Implemented in Release 7.3.0)

Table below starts with Test context and configuration info, then output (results). "X" = Part of Minimum Profile. The Release 7.2.1 Default values for SeqErrThresh (10) and SlowAdjThresh (3) are used below.

In the Second Pass, areas for udpst development are identified - primarily in the area of sub-interval output (results) - where Minimum Profile rows have no entry
